

# VOCO Profluorid® Varnish

Carefully read instructions prior to use 0482

**VOCO Profluorid Varnish** is a fluoride containing dental varnish for surface application to enamel and dentin. **VOCO Profluorid Varnish** will adhere to wet surfaces and is tolerant to moisture and saliva.

**VOCO Profluorid Varnish** is an ethanolic suspension of colophony with artificial flavors and sweetened with xylitol.

1 ml of **VOCO Profluorid Varnish** contains 50 mg of sodium fluoride equivalent to 22.6 mg of fluoride.

#### Indications:

**VOCO Profluorid Varnish** is intended for use as

- Treatment of hypersensitive teeth
- Sealing the dentinal tubules for cavity preparations or on sensitive root surfaces
- Cavity liner under amalgam restorations

#### Contraindications:

**VOCO Profluorid Varnish** is contraindicated in patients with ulcerative gingivitis or stomatitis or known allergies to colophony.

**VOCO Profluorid Varnish** is not intended for systemic treatment.

#### Methods of Use:

##### Recommended dosage:

- Treatment of patients with primary dentition  
Use approx. 0.25 ml of **VOCO Profluorid Varnish**
- Treatment of patients with adolescent or permanent dentition  
Use approx. 0.40 ml of **VOCO Profluorid Varnish**

**VOCO Profluorid Varnish** should be applied on a complete set of teeth in a very thin film thickness. A thick film thickness is more likely to peel off and does not provide better therapeutic results. A complete set of teeth can be treated between the ranges of 0.25ml and 0.40ml.

#### Application:

1. Thoroughly clean tartar from treatment areas.
2. For best results, eliminate any excessive moisture/saliva from area to be treated.
3. Use brush applicator or foam pellet to uniformly apply **VOCO Profluorid Varnish**, covering the entire surface to be treated as a thin film.
4. Allow area to become wet (either by gentle rinsing or natural salivary flow) to ensure setting of **VOCO Profluorid Varnish**.
5. Instruct patient to avoid hard food, alcohol, brushing or flossing for the next 4 hours after application.

#### Precautionary measures:

Eddematous swellings have been reported on rare occasions especially following application to extensive surfaces. Direct ingestion should be avoided. Dyspnea associated with asthmatic children, has been reported for similar preparations in extremely rare cases. Patients having sensitive digestive systems may experience nausea, usually after extensive treatment. In case of adverse reactions, remove varnish with a soft toothbrush and floss, and then rinse with warm water.

According to its purpose, **VOCO Profluorid Varnish** has a sticky consistency. Material remaining on the screw thread may cause the cap to stick. Wipe off any contaminating residues with an ethanol-containing cloth.

#### Storage:

Store at temperatures between 39°F - 73°F (4°C - 23°C). Do not use after expiration date.

# VOCO Profluorid® Varnish

Leer esmeradamente las instrucciones 0482

**VOCO Profluorid Varnish** es una laca dental que contiene fluoruros para la aplicación superficial a esmalte y dentina. **VOCO Profluorid Varnish** se adhiere a superficies mojadas y es tolerante a humedad y saliva.

**VOCO Profluorid Varnish** es una suspensión de colofonia con sabor artificial endulzada con xilitol en solución de etanol.

1 ml de **VOCO Profluorid Varnish** contiene 50 mg de fluoruro de sodio equivalente a 22.6 mg de ión de flúor.

#### Indicaciones:

**VOCO Profluorid Varnish** está indicado para

- el tratamiento de dientes hipersensibles
- el sellado de túbulos dentinales para preparaciones de cavidad o en superficies radiculares sensibles
- protector de cavidad debajo restauraciones de amalgama

#### Contraindicaciones:

**VOCO Profluorid Varnish** está contraindicado para pacientes con gingivitis ulcerante o estomatitis o alergias conocidas en cuanto a colofonia. **VOCO Profluorid Varnish** no es para el tratamiento sistemático.

#### Métodos de uso:

##### Dosificación recomendada:

- Tratamiento en pacientes con dientes de leche  
Usar aprox. 0.25 ml de **VOCO Profluorid Varnish**
- Tratamiento de pacientes con dentición mixta o dentadura fija  
Usar aprox. 0.40 ml de **VOCO Profluorid Varnish**

**VOCO Profluorid Varnish** se aplica como una película fina en el tejido dental duro. Películas gruesas se desprenden más fácil y no mejoran la terapéutica. Por experiencia, la cantidad requerida está entre 0.25 ml y 0.40 ml para un set completo de dientes.

#### Aplicación:

1. Límpiese bien el sarro de las áreas a tratar.
2. Para mejores resultados, elimíñese la humedad/saliva excesiva del área a tratar.
3. Utilícese un aplicador de cepillo o pellets de espuma para aplicar uniformemente **VOCO Profluorid Varnish**, cubriendo con una película fina la superficie completa a tratar.
4. Permitáse que se moje el área (o bien con enjuague suave o flujo de saliva natural) para asegurar un fraguado de **VOCO Profluorid Varnish**.
5. Instrúyase al paciente de evitar comida dura, alcohol, cepillado o seda dental durante las próximas 4 horas después de la aplicación.

#### Información/mejoras preventivas:

Inflamación edematosas ha sido reportada en pocas ocasiones especialmente siguiente a la aplicación en superficies extensas. Una ingestión directa debe ser evitada. Disnea en conexión con niños asmáticos ha sido reportada - en casos extremadamente raros - para preparaciones similares. Pacientes que tienen sistemas digestivos sensibles pueden experimentar náuseas, normalmente después de un tratamiento extenso. En caso de reacciones adversas, eliminar la laca con un cepillo de dientes blando y seda dental, luego lavar con agua caliente. No realizar tratamiento con otros preparados de fluoruros en el día de la aplicación. Suspender el tratamiento con comprimidos de fluoruro por unos días después del tratamiento. No tragar. **VOCO Profluorid Varnish** tiene, correspondientemente a su modo de aplicación una consistencia pegajosa. Los residuos de material en la rosca de tornillo pueden causar una pegadura de la tapa. Limpiar eventualmente las impurezas con un paño que contenga etanol.

#### Conservación:

Consérvese a temperaturas entre 39°F - 73°F (4°C - 23°C). No usar después de la fecha de caducidad.
